Version: 1.2 Revision date: 26/04/2012

1 IDENTIFICATION OF THE SUBSTANCE AND OF THE COMPANY/UNDERTAKING

1.1 Product identifier:

Identification on the label/Trade name(s): FUEL OIL; FUEL OIL M-100

Name of Substance:	CAS No.:	EC No.:	Index No.:
Fuel oil, residual	68476-33-5	270-675-6	649-024-00-9

REACH registration No.: 01-2119474894-22-0067

1.2 Relevant identified uses of the substance and uses advised	against:
--	----------

1.2.1 Identified uses:

-Manufacture of substances,

-Use of substance as intermediate,

-Uses in Coatings: Industrial, professional

-Use in Road and Construction Applications: Professional

-Distribution of substance,

-Use in Road and Construction Application -Use as a fuel: Industrial, professional

-Formulation and repackaging of substances & mixtures

1.2.2 Uses advised against: Uses other than those given above, are not recommended.

1.3 Manufacturer

"Orsknefteorgsintez", OJSC. Goncharova str., 1a, Orsk city, Orenburg region, 462407, Russian Federation **1.4 Details of the supplier of the safety data sheet:**

1.4 Details of the supplier of the safety data sh

Only Representative: **SpetsInterProject Oy** E-mail: hs@reach-registrator.net

1.5 Emergency telephone Number:

2 HAZARDS IDENTIFICATION

2.1 Classification of the substance

2.1.1 Classification:

EU CLP 1272/2008: This classification relates to Heavy Fuel Oil Components (> 20.5 mm²/s @ 40°C)

Classification: Acute Tox. 4; H332; Repr. 2; H361; Carc. 1B; H350; STOT RE 2; H373; Aquatic Chronic 1; H410

For full text of H- phrases: see section 2.2.

67/548/EEC(DSD): This classification relates to Heavy Fuel Oil Components Status: Annex 1 in combination with Self Classification

Classification: Xn; R20; R48/21; R66; Carc. Cat. 2; R45; Repr. Cat. 3; R63; N; R50/53

Indication of danger:

Xn - harmful

N - dangerous for the environment

R-phrases:

R20 - harmful by inhalation

R45 - may cause cancer

R48/21 - harmful: danger of serious damage to health by prolonged exposure in contact with skin

R63 - possible risk of harm to the unborn child

R66 - repeated exposure may cause skin dryness or cracking

R50/53 – Very toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment <u>S-phrases:</u>

S23 - do not breathe gas/fumes/vapour/spray (appropriate wording to be specified by the manufacturer)

S24 - avoid contact with skin

S36/37 - wear suitable protective clothing and gloves

S45 - in case of accident or if you feel unwell, seek medical advice immediately (show the label where possible)

S51 - use only in well-ventilated areas

S53 - avoid exposure - obtain special instructions before use

S61 - avoid release to the environment. refer to special instructions/safety data sheets

2.1.2 The most important adverse effects

Physical/chemicalThe product is not classified as flammable but consists of hydrocarbons and can burn. Vapours may
hazards:hazards:form explosive mixtures with air. If water gets into contact with hot product (>100 °C) there is a risk
of splashing and boil-over.

For health hazards: Repeated exposure may cause skin dryness or cracking. Danger of serious damage to health by

OJSC Orsknefteorgsintez 1a Goncharova street,

Orsk, Orenburg region, 462407, Russian Federation

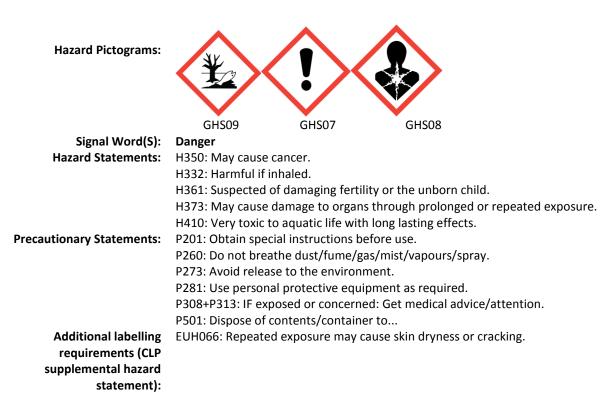

Version: 1.2 Revision date: 26/04/2012

prolonged exposure in contact with skin. Long or repeated skin contact may irritate the skin and may cause formation of cancer tumors. Vapours may irritate eyes and respiratory system. High doses may cause nausea and headaches. Harmful by inhalation. May cause cancer. Possible risk of harm to the unborn child.

For environmental hazards:

Very toxic to aquatic life with long lasting effects. Release of the product into water will result in a film of hydrocarbons floating on the surface. Due to low water solubility the predominant loss is through volatilisation. Molecules with higher molecular weight will be absorbed on sediment.

2.2 Label elements:

2.3 Other hazards: The substance does not fulfill the PBT / vPvB criteria.

3 COMPOSITION/INFORMATION ON INGREDIENTS

3.1 Substance:

Description: The liquid product from various refinery streams, usually residues. The composition is complex and varies with the source of the crude oil.

The substance is UCVB substance. The purity is 100%

Ingredient(s)/Constituent(s):

Name of Constituent:	CAS No.:	EC No.:	Index No.:	Composition, % (w/w):
Mono-aromatic hydrocarbons	-	-	-	5.4
Di-aromatic hydrocarbons	-	-	-	2.9
Tri-aromatic hydrocarbons and higher	-	-	-	1.4
Saturated hydrocarbons	-	-	-	90.3

4 FIRST AID MEASURES

4.1 Description of first aid measures:

4.1.0 Warning: before intervention

SAFETY DATA SHEET (SDS): FUEL OIL; FUEL OIL 100 According to Regulation (EC) No 1907/2006 (REACH) Page 3 of 34

1a Goncharova street, Orsk, Orenburg region, 462407, Russian Federation

Version: 1.2 Revision date: 26/04/2012

Spillages make surface slippery

Before attempting to rescue casualties, isolate area from all potential sources of ignition including disconnecting electrical supply.

Ensure adequate ventilation and check that a safe, breathable atmosphere is present before entry into confined spaces. (Subject to applicability) Hydrogen sulphide (H2S) can accumulate in the headspace of storage tanks and reach potentially hazardous concentrations.

4.1.1 In case of inhalation:

Symptoms: irritation of the respiratory tract due to excess fume, mists or vapour exposure

If breathing is difficult, remove victim to fresh air and keep at rest in a position comfortable for breathing.

If casualty is unconscious and:

* Not breathing – ensure that there is no obstruction to breathing and give artificial respiration by trained personnel. If necessary, give external cardiac massage and obtain medical assistance.

* Breathing – place in the recovery position. Administer oxygen if necessary.

Obtain medical assistance if breathing remains difficult.

If there is any suspicion of inhalation of H2S:

- Rescuers must wear breathing apparatus, belt and safety rope, and follow rescue procedures.

- Remove casualty to fresh air as quickly as possible.

- Immediately begin artificial respiration if breathing has ceased.

-Provision of oxygen may help.

- Obtain medical advice for further treatment.

4.1.2 In case of skin contact:

Symptoms: dry skin, irritation in case of repeated or prolonged exposure. May cause burn in case of contact with product at high temperature

Remove contaminated clothing and footwear and dispose of safely. Wash affected area with soap and water. Never use gasoline, kerosene or other solvents for washing of contaminated skin. Seek medical attention if skin irritation, swelling or redness occurs. When using high-pressure equipment, injection of product can occur. If high-pressure injuries occur, immediately seek professional medical attention. Do not wait for symptoms to develop. For minor thermal burns: Cool the burn. Hold the burned area under cold running water for at least five minutes, or until the pain subsides. However, body hypothermia must be avoided. Do not put ice on the burn; Remove non-sticking garments carefully. DO NOT attempt to remove portions of clothing glued to burnt skin but cut round them. Seek medical attention in all cases of serious burns.

4.1.3 In case of eyes contact:

Symptoms: slight irritation (unspecific). May cause burn in case of contact with product at high temperature Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do so. Continue rinsing. If irritation, blurred vision or swelling occurs and persists, obtain medical advice from a specialist. If hot product is splashed into the eye, it should be cooled immediately to dissipate heat, under cold running water. Immediately obtain specialist medical assessment and treatment for the casualty.

4.1.4 In case of ingestion/aspiration:

Symptoms: Few or no symptoms are expected. If any, nausea and diarrhea might occur.

Do not induce vomiting. Ask for medical assistance. Do not give anything by mouth to an unconscious person.

4.2 Most important symptoms and effects, both acute and delayed

	··· ··· · · · ··· · · · · · · · · · ·
Inhalation:	Irritation of the respiratory tract due to excess fume, mists or vapour exposure. Not breathing.
	Headache, nausea, dizziness. Longer inhalation of high-concentration vapours may cause loss of
	consciousness, as well as hypoxia if oxygen concentration in air drops below 17%.
Skin contact:	Dry skin, irritation in case of repeated or prolonged exposure. Irritating and de-greasing effect,
	with possible appearance of redness and/or dermatitis in sensitive persons . May cause burn in
	case of contact with product at high temperature.
Eyes contact:	Slight irritation (unspecific) of eyes. Redness, tearing in sensitive persons. May cause burn in
	case of contact with product at high temperature.
Ingestion/aspiration:	Nausea and diarrhea might occur, irritation to mucous membranes, vomiting, and risk of
	pulmonary oedema due to aspiration into lungs.

4.3 Indication of any immediate medical attention and special treatment needed Immediately call a POISON CENTER or doctor/physician.

5 FIRE-FIGHTING MEASURES

5.1 Extinguishing media:

1a Goncharova street, Orsk, Orenburg region, 462407, Russian Federation

Version: 1.2 Revision date: 26/04/2012

Suitable extinguishing media: Foam (Specifically trained personnel only), water fog (Specifically trained personnel only), dry chemical powder, carbon dioxide, other inert gases (subject to regulations), sand or earth.

Unsuitable extinguishing media: Do not use direct water jets on the burning product; they could cause splattering and spread the fire. Simultaneous use of foam and water on the same surface is to be avoided as water destroys the foam. **5.2 Special hazards arising from the substance or mixture**

Combustion Products: Incomplete combustion is likely to give rise to a complex mixture of airborne solid and liquid particulates and gases, including carbon monoxide, H2S, SOx (sulfur oxides) or sulfuric acid and unidentified organic and inorganic compounds.

This substance will float and can be reignited on surface water.

5.3 Advice for fire-fighters:

In case of a large fire or in confined or poorly ventilated spaces wear full fire resistant protective clothing and selfcontained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

6 ACCIDENTAL RELEASE MEASURES

6.1 Personal precautions, protective equipment and emergency procedures:

6.1.1 For non-emergency personnel:

Stop or contain leak at the source if safe to do so. Avoid direct contact with released material. Stay upwind. In case of large spillages, alert occupants in downwind areas. Keep non-involved personnel away from the area of spillage. Alert emergency personnel. Except in case of small spillages, the feasibility of any actions should always be assessed and advised, if possible, by a trained, competent person in charge of managing the emergency. It is recommended to eliminate all ignition sources if safe to do so (e.g. electricity, sparks, fires, flares). When the presence of dangerous amounts of H2S around the spilled product is suspected or proved, additional or special actions may be warranted, including access restrictions, use of special protection equipment, procedures and personnel training. If required, notify relevant authorities according to all applicable regulations.

6.1.2 For emergency responders:

Small spillages: normal antistatic working clothes are usually adequate. Large spillages: full body suit of chemically resistant and antistatic material, if necessary heat resistant and insulated.

Work gloves providing adequate chemical resistance, specifically to aromatic hydrocarbons. Note: gloves made of PVA are not water-resistant, and are not suitable for emergency use.

If contact with hot product is possible or anticipated, gloves should be heat-resistant and thermally insulated.

Work helmet. Antistatic non-skid safety shoes or boots, if necessary heat-resistant.

Goggles or face shield, if splashes or contact with eyes is possible or anticipated.

Respiratory protection: A half or full-face respirator with filter(s) for organic vapours/H2S or a Self Contained Breathing Apparatus (SCBA) can be used according to the extent of spill and predictable amount of exposure. If the situation cannot be completely assessed, or if an oxygen deficiency is possible, only SCBA's should be used.

6.2 Environmental precautions:

Prevent product from entering sewers, rivers, waterways or other bodies of water

6.3 Methods for containment and cleaning up:

Spillages onto land

Prevent product from entering sewers, rivers, waterways or other bodies of water. If necessary dike the product with dry earth, sand or similar non-combustible materials. Let hot product cool down naturally. Large spillages may be cautiously covered with foam, if available, to limit fire risk. Do not use direct jets. When inside buildings or confined spaces ensure adequate ventilation. Absorb spilled product with suitable non-combustible materials. Collect free product with suitable means. Collect recovered product and other contaminated materials in suitable containers for recycle, recovery or safe disposal. In case of soil contamination, remove contaminated soil for remediation or disposal, in accordance with local regulations.

Spillages on water or at sea

Product less dense than water: In case of small spillages in closed waters (i.e. ports), contain product with floating barriers or other equipment. Collect spilled product by absorbing with specific floating absorbents. If possible, large spillages in open waters should be contained with floating barriers or other mechanical means. If this is not possible, control the spreading of the spillage, and collect the product by skimming or other suitable mechanical means. The use of dispersants should be advised by an expert, and, if required, approved by local authorities. Collect recovered product and other contaminated materials in suitable tanks or containers for recycle, recovery or safe disposal. Product which is denser than water will sink to the bottom, and usually no intervention will be feasible. If possible, collect the product and contaminated materials with mechanical means, and store/dispose of according to relevant regulations. In special

1a Goncharova street, Orsk, Orenburg region, 462407, Russian Federation

Version: 1.2 Revision date: 26/04/2012

situations (to be assessed on case-by case basis, according to expert judgement and local conditions), excavations of trenches on the bottom to collect the product, or burying the product with sand may be a feasible option.

6.4 Reference to other sections:

See Section 7 for information on safe handling.

See section 8 for information on personal protection equipment.

See Section 13 for information on disposal.

6.5 Additional information:

Note: recommended measures are based on the most likely spillage scenarios for this material; however, local conditions (wind, air temperature, wave/current direction and speed) may significantly influence the choice of appropriate actions. For this reason, local experts should be consulted when necessary. Local regulations may also prescribe or limit actions to be taken.

Concentration of H2S in tank headspaces may reach hazardous values, especially in case of prolonged storage. This situation is especially relevant for those operations which involve direct exposure to the vapours in the tank. Spillages of limited amounts of products, especially in the open air when vapours will be usually quickly dispersed, are dynamic situations, which are unlikely to entail exposure to dangerous concentrations. As H2S has a density greater than ambient air, a possible exception may regard the build-up of dangerous concentrations in specific spots, like trenches, depressions or confined spaces. In all these circumstances, however, the correct actions should be assessed on a case-by-case basis.

7 HANDLING AND STORAGE

7.1 Precautions for safe handling:

General information:

Obtain special instructions before use. Ensure that all relevant regulations regarding handling and storage facilities of flammable products are followed. A specific assessment of inhalation risks from the presence of H2S in tank headspaces, confined spaces, product residue, tank waste and waste water, and unintentional releases must be made to help determine controls appropriate to local circumstances. It is recommended to keep away from sparks/open flames/hot surfaces. – No smoking. Use and store only outdoors or in a well-ventilated area. Avoid contact with the product. Avoid release to the environment.

7.1.1 Protective measures:

Take precautionary measures against static electricity. Ground/bond containers, tanks and transfer/receiving equipment. The vapour is heavier than air. Beware of accumulation in pits and confined spaces. Do not breathe fume/ mist/ vapours Avoid contact with skin. Precautions should be taken to avoid skin burns when handling hot product. Use adequate personal protective equipment as required. For more information regarding protective equipment and operational conditions see Exposure scenarios.

7.1.2 Advice on general occupational hygiene:

Ensure that proper housekeeping measures are in place. Contaminated materials should not be allowed to accumulate in the workplaces and should never be kept inside the pockets. Keep away from food and beverages. Do not eat, drink or smoke while using this product. Wash the hands thoroughly after handling. Change contaminated clothes at the end of working shift.

7.2 Conditions for safe storage, including any incompatibilities

Storage area layout, tank design, equipment and operating procedures must comply with the relevant European, national or local legislation. Storage installations should be designed with adequate bunds so as to prevent ground and water pollution in case of leaks or spills. Cleaning, inspection and maintenance of internal structure of storage tanks must be done only by properly equipped and qualified personnel as defined by national, local or company regulations. Before entering storage tanks and commencing any operation in a confined area, check the atmosphere for oxygen content, hydrogen sulphide (H2S) and flammability. Store separately from oxidising agents.

Recommended and Unsuitable Materials for Storage

Recommended materials: For containers, or container linings use mild steel, stainless steel.

Unsuitable materials: some synthetic materials may be unsuitable for containers or container linings depending on the material specification and intended use. Compatibility should be checked with the manufacturer.

Container Advice If the product is supplied in containers:

- Keep only in the original container or in a suitable container for this kind of product.
- Store in a well-ventilated place.
- Keep containers tightly closed and properly labelled.

1a Goncharova street, Orsk, Orenburg region, 462407, Russian Federation

Version: 1.2 Revision date: 26/04/2012

• Empty containers may contain combustible product residues. Do not weld, solder, drill, cut or incinerate empty containers, unless they have been properly cleaned.

7.3 Specific end use(s): Not applicable

8 EXPOSURE CONTROL/PERSONAL PROTECTION

8.1 Control parameters:

8.1.1 Occupational exposure limits: Consult local authorities for acceptable exposure limits

<u>Oil mist:</u>

EH40-WEL (United Kingdom (UK), 2002)

STEL: 10 mg/m3 15 minute(s)

TWA: 5 mg/m3 8 hour(s)

8.1.2 Additional exposure limits under the conditions of use: Not available.

8.1.3 DNEL/DMEL values (see table below) and PNEC-Values (none)

DNEL/DMEL			Exposuro	Exposure
Worker		Consumer	Exposure route	frequency
Industry	Professional			
			Oral	Acute
		0.015 mg/kg/24h		Repeated
No hazard identified for this route (data available)		No DNEL needed since no exposure expected	Dermal	Acute
0.065 mg/kg/8h		No DNEL needed since no exposure expected		Repeated
4700 mg/m3/15 min (for lethality) [aerosol]		No DNEL needed since no exposure expected		Acute
0.12 mg/m3/8h [aerosol]		No DNEL needed since no exposure expected	Inhalation	Repeated

PNEC oral (secondary poisoning): 66.7 mg/kg food

8.2 Exposure controls

PPE20: If repeated and/or prolonged skin exposure to the substance is likely, then wear suitable gloves tested to EN374 and provide employee skin care programmes

Please refer to Annex of eSDS for controls of each exposure scenario.

9 PHYSICAL AND CHEMICAL PROPERTIES

9.1 Information on basic physical and chemical properties

Appearance:	Viscous Liquid	Vapour density:	Not applicable
Colour:	Dark	Relative Density (15°C):	840 - 1200 Kg/m³
Odour:	Specific for oil products	Water solubility:	Insoluble
Odour threshold:	Not available	n-Octanol/Water (log Po/w) :	Not applicable
pH:	Not available	Auto-ignition temperature:	350 °C (662 °F)
Melting point/range (°C):	<30	Decomposition temperature:	Not available
Boiling point/range (°C):	Approx. 236.1 – 541.9	Assumed viscosity 100 °C:	6,8°
Flash point (°C):	min 110 °C (for sort M-100)	Viscosity at 100°C:	50 mm²/s
Evaporation rate:	Not applicable	Explosive properties:	Non explosive
Flammability:	Non flammable	Oxidising properties:	Not oxidising
Upper/lower flammability limits in air:	91 ÷ 155 °C (195.8 ÷ 311 °F)	Pour point:	max 25 °C (M-100) for Fuel Oil prepared from highly paraffinic crude: max 42 °C (M-100).
Explosive concentration of vapors in air :	1.4 – 8.0% (by volume)	Sulphur:	III sort: max 1.5%; IV sort: max 2.0%; V sort: max 2.5%; VI sort: max 3.0%.
Vapour pressure:	0.02 to 0.791 kPa at 120°C	Ash:	Low ash: max 0.05%; Ashy:

1a Goncharova street, Orsk, Orenburg region, 462407, Russian Federation

Version: 1.2 Revision date: 26/04/2012

(MW 330 to 500) 0.063 to 0.861 kPa at 150°C (MW 350 to 420) max 0.14%.

9.2 Other information:	
Fat solubility(solvent-oil to be specified) etc.:	Dissoluble in organic solvents, oils.
Bulk Density:	Not available
Dissociation constant in water(pKa):	Not available
Oxidation-reduction Potential:	Not available

10 STABILITY AND REACTIVITY

10.1 Reactivity: Stable at prescribed storage and use conditions.

10.2 Chemical stability: Under normal conditions, the product is stable. No hazardous reaction when handled and stored according to provisions.

10.3 Possibility of hazardous reactions: Under normal conditions, not hazardous reactions will occur.

10.4 Conditions to avoid: Heating causes evaporation of flammable vapours.

10.5 Incompatible materials: Strong oxidising agents.

10.6 Hazardous decomposition products: Burning product gives rise to a complex mixture of gases and airborne particles including carbon monoxide and sulphur oxides.

11 TOXICOLOGICAL INFORMATION

11.1 Toxicokinetics, metabolism and distribution

No experimental data were located on the absorption, distribution, metabolism or elimination of Heavy Fuel Oil Components in vivo. This is not unexpected given the predictable technical difficulties associated with characterising the fate of complex UVCB petroleum substances in the body.

Physicochemical considerations suggest that uptake across skin is possible but will be relatively low since only around 2% of the hydrocarbon blocks present have a log Pow <5 (ECHA, 2008). This is supported by results from animal acute dermal toxicity testing, where no mortality and only limited (gross) systemic changes were recorded following 24 h occluded exposure to 2-5 g kg-1 bw of test substance, indicating that uptake by undamaged skin was limited; or that the absorbed hydrocarbon components were of low inherent toxicity. No measured data are available on the distribution or metabolic fate of Heavy Fuel Oil Components.

Results from a rat acute inhalation toxicity study (where no grossly observable systemic changes were found at necropsy) combined with the low water solubility of Heavy Fuel Oil Components suggests that uptake across the lung is low. This is supported by physicochemical consideration (ECHA, 2008). No information was located on the uptake and subsequent in vivo fate of Heavy Fuel Oil Components following inhalation exposure to aerosol or vapour.

With regard to uptake after ingestion, modelled information indicates that the majority of hydrocarbon substances present in Heavy Fuel Oil Components have a predicted log Pow of >5 suggesting that uptake by micellar solubilisation is possible (ECHA, 2008). The extent is uncharacterised however, but oral LD50 values in the range 4 g/kg bw/d to >25 g/kg bw/d suggests either that this is low, or that the absorbed components are of low intrinsic toxicity. No information was located on the metabolism and subsequent fate of Heavy Fuel Oil Components in vivo after ingestion.

11.2 Information on toxicological effects

Acute toxicity:	Acute oral LD50 > 5000 mg/kg Acute Inhalation LC50 = 4.1 mg/l Harmful by inhalation Acute dermal LD50 > 2000 mg/kg
Skin corrosion/Irritation:	In vivo skin irritation - Not irritant. Repeated exposure may cause skin dryness or cracking
Serious eye damage/irritation:	In vivo eye irritation - Not irritant.
Skin sensitization:	No evidence of sensitisation.
Germ cell mutagenicity:	Not mutagenic In vitro cytogenicity study in mammalian cells – Ambiguous In vivo cytogenicity – Negative In vivo gene mutation - Negative
Carcinogenicity:	Carcinogenic.
Reproductive toxicity:	Adversely affect foetal development.

1a Goncharova street, Orsk, Orenburg region, 462407, Russian Federation

Version: 1.2 Revision date: 26/04/2012

STOT- single exposure:	Reproductive toxicity LOAEL =1 mg/kg/day No data
STOT-repeated exposure:	Danger of serious damage to health by prolonged exposure in contact with skin. Changes in haematological and clinical chemistry parameters and organ weights were recorded after treatment with Heavy Fuel Oil Components. In general, alterations in serum cholesterol and blood urea nitrogen were recorded following administration of higher dermal doses accompanied by red cell, platelet, liver and thymus effects at lower treatment levels. Sub-chronic repeat dose dermal : NOAEL =1.1 mg/kg
Aspiration hazard:	Not classified

12 ECOLOGICAL INFORMATION

12.1 Toxicity:

Very toxic to aquatic life with long lasting effects. Acute aquatic invertebrate EL50 2 mg/l Acute aquatic algae ErL50 0.75 mg/l Acute aquatic fish LL50 79 mg/l Long-term invertebrate NOEL 0.27 mg/l Long-term fish NOEL 0.1 mg/l Reproductive toxicity bird NOAEL 20,000 mg/kg diet

12.2 Persistence and degradability:

Heavy fuel oils are resistant to hydrolysis because they lack a functional group that is hydrolytically reactive. Therefore, this fate process will not contribute to a measurable degradative loss of these substances from the environment. This substance does not have the potential to undergo photolysis in water and soil, and this fate process will not contribute to a measurable degradative from the environment.

An evaluation of representative hydrocarbon structures indicates some structures meet the Persistent (P) or very Persistent (vP) criteria (see CONCAWE, 2010b).

12.3 Bioaccumulative potential:

An evaluation of representative hydrocarbon structures indicates no structures meet the very Bioaccumulative (vB) criterion but some structures meet the Bioaccumulative (B) criterion (see CONCAWE, 2010b).

12.4 Mobility in soil:

Not available.

12.5 Results of PBT&vPvB assessment:

Anthracene is not present in this substance at greater than 0.1% (CONCAWE, 2010b). No other representative hydrocarbon structures were found to meet the PBT / vPvB criteria. The substance does not fulfil the PBT / vPvB criteria (see CONCAWE, 2010b).

12.6 Other adverse effects:

This substance may contribute to ozone formation in the near surface atmosphere. However, the photochemical formation of ozone depends on a complex interaction of other atmospheric pollutant sources and environmental conditions. Therefore, the contribution of this substance to ozone formation is outside the scope of this substance assessment and is more appropriately addressed via EU air quality directives.

The product emits Volatile Organic Compounds to the atmosphere. Release of the product into water will result in a film of hydrocarbons floating on the surface. The main fate process is expected to be slow biodegradation in soil and sediment.

13 DISPOSAL CONSIDERATIONS

Waste of residues: Contaminated packaging: European waste catalogue (EWC): Hazardous waste:

Recycling (redistillation) or incineration. Through authorized contractor or collector. 13 07 03* other fuels (including mixtures). It is recommended to handle product remnants as hazardous waste.

14 TRANSPORT INFORMATION

15 REGULATORY INFORMATION

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

Relevant information regarding authorization:	Not applicable
Relevant information regarding restriction:	Not applicable
Other EU regulations:	Regulation (EU) No 453/2010
	Regulation (EC) No 1272/2008
Other National regulations:	Not applicable.

The Chemical Safety Assessment has been performed for the substance.

16 OTHER INFORMATION

16.1 Indication of changes

Version 1.2 reflects a change of the Only Representative and a change in the trade name of the product.

Version 1.1 amended by EU No 453/2010. The data was updated and is in consistency with the Chemical Safety Report provided by the Lead Registrant of the joint submission during REACH registration process. Section 3 was updated and is in consistency with the registration dossier on the substance provided by the manufacturer's Only Representative during REACH registration process.

16.2 Key sources for data

Hazard Statements:	R-phrases:
H350: May cause cancer.	R20 - harmful by inhalation
H332: Harmful if inhaled.	R45 - may cause cancer
H361: Suspected of damaging fertility or the unborn child.	R48/21 - harmful: danger of serious damage to health by
H373: May cause damage to organs through prolonged or	prolonged exposure in contact with skin
repeated exposure.	R63 - possible risk of harm to the unborn child
H410: Very toxic to aquatic life with long lasting effects.	R66 - repeated exposure may cause skin dryness or cracking
EUH066: Repeated exposure may cause skin dryness or cracking.	R50/53 – Very toxic to aquatic organisms, may cause long- term adverse effects in the aquatic environment
Precautionary Statements:	S-phrases:
P201: Obtain special instructions before use.	S23 - do not breathe gas/fumes/vapour/spray (appropriate
P260: Do not breathe dust/fume/gas/mist/vapours/spray.	wording to be specified by the manufacturer)
P273: Avoid release to the environment.	S24 - avoid contact with skin
P281: Use personal protective equipment as required.	S36/37 - wear suitable protective clothing and gloves
P308+P313: IF exposed or concerned: Get medical	S45 - in case of accident or if you feel unwell, seek medical

Specific Risk Management Measures and Operating Conditions
Consider technical advances and process upgrades (including automation) for the elimination of releases. Minimise exposure using measures such as closed systems, dedicated facilities and suitable general / local exhaust ventilation. Drain down systems and clear transfer
lines prior to breaking containment. Clean / flush equipment, where possible, prior to maintenance.
Where there is potential for exposure: Restrict access to authorised persons;
provide specific activity training to operators to minimise exposures; wear
suitable gloves and coveralls to prevent skin contamination; wear respiratory
protection when its use is identified for certain contributing scenarios; clear up spills immediately and dispose of wastes safely. Ensure safe systems of work
or equivalent arrangements are in place to manage risks. Regularly inspect, test and maintain all control measures. Consider the need for risk based health surveillance. G20
Handle substance within a closed system E47. Wear chemically resistant gloves
(tested to EN374) in combination with 'basic' employee training PPE16.
Handle substance within a closed system E47. Sample via a closed loop
or other system to avoid exposure E8. Avoid carrying out activities involving
exposure for more than 15 minutes OC26. Wear chemically resistant gloves
(tested to EN374) in combination with 'basic' employee training PPE16.
Store substance within a closed system E84. Avoid carrying out activities
involving exposure for more than 4 hours OC28. Wear chemically resistant
gloves (tested to EN374) in combination with 'basic' employee training PPE16.
Handle within a fume cupboard or implement suitable equivalent methods to minimise exposure E12. Wear suitable gloves tested to EN374 PPE15.
Avoid carrying out activities involving exposure for more than 4 hours
OC28. Transfer via enclosed lines E52. Clear transfer lines prior to de- coupling
E39. Retain drain downs in sealed storage pending disposal or for subsequent
recycle ENVT4. Wear chemically resistant gloves (tested to EN374) in
combination with 'basic' employee training PPE16.
Avoid carrying out activities involving exposure for more than 1 hour

[EE2].

Section 4 Guidance to check compliance with the Exposure Scenario

4.1. Health

Predicted exposures are not expected to exceed the DN(M)EL when the Risk Management Measures/Operational Conditions outlined in Section 2 are implemented. G22.

Where other Risk Management Measures/Operational Conditions are adopted, then users should ensure that risks are managed to at least equivalent levels. G23.

Available hazard data do not enable the derivation of a DNEL for carcinogenic effects. G33. Available hazard data do not support the need for a DNEL to be established for other health effects. G36. Risk Management Measures are based on qualitative risk characterisation. G37.

4.2. Environment

Guidance is based on assumed operating conditions which may not be applicable to all sites; thus, scaling may be necessary to define appropriate site-specific risk management measures [DSU1]. Required removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or in combination [DSU2]. Required removal efficiency for air can be achieved using onsite technologies, either alone or in combination [DSU3]. Further details on scaling and control technologies are provided in SpERC factsheet (http://cefic.org/en/reach-for-industries-libraries.html)

Max RCR Water = 2,43E-01 Max RCR Air = 2,74E-02

Assessment Method			
See Section 3.			
Section 2 Operational conc	ditions and risk management measures		
Section 2.1 Control of work	ker exposure		
Product characteristics			
Physical form of product	Liquid		
Vapour pressure (kPa)	Liquid, vapour pressure <0.5 kPa at STP. OC3.		
Concentration of substance in product	Covers percentage substance in the product up to 100 % (unless stated differently) G13		
Frequency and duration of use/exposure	Covers daily exposures up to 8 hours (unless stated differently) G2		
Other Operational Conditions affecting exposure	Assumes use at not more than 20°C above ambient temperatures, unless stated differently. G15. Assumes a good basic standard of occupational hygiene is implemented G1		
Contributing Scenarios	Specific Risk Management Measures and Operating Conditions		
General measures (carcinogens) G18	Consider technical advances and process upgrades (including automation) for the elimination of releases. Minimise exposure using measures such as closed systems, dedicated facilities and suitable general / local exhaust ventilation. Drain down systems and clear transfer lines prior to breaking containment. Clean / flush equipment, where possible, prior to maintenance. Where there is potential for exposure: Restrict access to authorised persons; provide specific activity training to operators to minimise exposures; wear suitable gloves and coveralls to prevent skin contamination; wear respiratory protection when its use is identified for certain contributing scenarios; clear up spills immediately and dispose of wastes safely. Ensure safe systems of work or equivalent arrangements are in place to manage risks. Regularly inspect, test and maintain all control measures. Consider the need for risk based health		
CS99 Film formation - force drying, stoving and other technologies.	surveillance. G20 Provide extract ventilation to points where emissions occur E54. Wear chemically resistant gloves (tested to EN374) in combination with 'basic' employee training PPE16.		
CS15 General exposures	Handle substance within a closed system E47. Provide extract ventilation		
(closed systems).	to points where emissions occur E54. Provide a good standard of		
	controlled ventilation (10 to 15 air changes per hour) E40. Wear chemically resistant gloves (tested to EN374) in combination with 'basic' employee training PPE16.		
CS3 Material transfers	Provide a good standard of controlled ventilation (10 to 15 air changes per hour) E40. Wear chemically resistant gloves (tested to EN374) in combination with 'basic' employee training PPE16. Ensure material transfers are under containment or extract ventilation E66.		
CS36 Laboratory activities.	Handle within a fume cupboard or implement suitable equivalent methods to minimise exposure E12. Wear suitable gloves tested to EN374 PPE15.		
CS39 Equipment cleaning and maintenance	Drain down and flush system prior to equipment break-in or maintenance E55. Wear chemically resistant gloves (tested to EN374) in combination with specific activity training PPE17. Retain drain downs in sealed storage pending disposal or for subsequent recycle ENVT4.		
CS67 Storage.	Store substance within a closed system E84. Wear chemically resistant gloves (tested to EN374) in combination with 'basic' employee training PPE16.

Product characteristics	
Substance is complex UVCB [PrC3]. Predominantly hydrophobic [PrC4a].	
Amounts used	
Fraction of EU tonnage used in region	0.1
Regional use tonnage (tonnes/year)	1.1e7
Fraction of Regional tonnage used locally	1.4e-1
Annual site tonnage (tonnes/year)	1.5e6 5.0e6
Maximum daily site tonnage (kg/day) Frequency and duration of use	5.000
Continuous release [FD2].	
Emission days (days/year)	300
Environmental factors not influenced by risk management	300
Local freshwater dilution factor	10
Local marine water dilution factor	100
Other given operational conditions affecting environmental exposure	100
Release fraction to air from process (initial release prior to RMM)	7.0e-4
Release fraction to wastewater from process (initial release prior to release prior to	4.4e-7
RMM)	1.107
Release fraction to soil from process (initial release prior to RMM)	0
Technical conditions and measures at process level (source) to preven	t release
Common practices vary across sites thus conservative process release estin

Version: 1.2 Revision date: 26/04/2012

2. Environment
he Hydrocarbon Block Method has been used to calculate environmental exposure with the
ETRORISK model [EE2].
ection 4 Guidance to check compliance with the Exposure Scenario
1. Health
redicted exposures are not expected to exceed the DN(M)EL when the Risk Management
leasures/Operational Conditions outlined in Section 2 are implemented. G22.
/here other Risk Management Measures/Operational Conditions are adopted, then users should ensure
at risks are managed to at least equivalent levels. G23.
vailable hazard data do not enable the derivation of a DNEL for carcinogenic effects. G33. Available hazard
ata do not support the need for a DNEL to be established for other health effects. G36. Risk Management
leasures are based on qualitative risk characterisation. G37.
2. Environment
uidance is based on assumed operating conditions which may not be applicable to all sites; thus, scaling
ay be necessary to define appropriate site-specific risk management measures [DSU1].
equired removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or
combination [DSU2]. Required removal efficiency for air can be achieved using onsite
chnologies, either alone or in combination [DSU3]. Further details on scaling and control
chnologies are provided in SpERC factsheet (<u>http://cefic.org/en/reach-for-industries-libraries.html</u>) [DSU4].
lax RCR Water = 9,09E-01

Max RCR Air = 5,73E-01

Other given operational conditions affecting environmental exposure			
Release fraction to air from wide dispersive use (regional only)	1.0e-4		
Release fraction to wastewater from wide dispersive use	0.00001		
Release fraction to soil from wide dispersive use (regional only)	0.00001		
Technical conditions and measures at process level (source) to prevent re	lease		
Common practices vary across sites thus conservative process release estimate			
Technical onsite conditions and measures to reduce or limit discharges, a			
to soil			
Risk from environmental exposure is driven by humans via indirect exposure [TC	CR1j].		
No wastewater treatment required [TCR6].	<i>7</i> -		
Treat air emission to provide a typical removal efficiency of (%)	N/A		
Treat onsite wastewater (prior to receiving water discharge) to provide	0		
the required removal efficiency \geq (%)			
If discharging to domestic sewage treatment plant, provide the required	0		
onsite wastewater removal efficiency of \geq (%)	-		
Organisation measures to prevent/limit release from site			
Do not apply industrial sludge to natural soils [OMS2]. Sludge should be inciner	ated, contained or		
reclaimed [OMS3].			
Conditions and measures related to municipal sewage treatment plant			
Estimated substance removal from wastewater via domestic sewage	88.8		
treatment (%)	00.0		
Total efficiency of removal from wastewater after onsite and offsite	88.8		
(domestic treatment plant) RMMs (%)	00.0		
Maximum allowable site tonnage (M _{Safe}) based on release following total	2.3e3		
wastewater treatment removal (kg/d)	2.060		
Assumed domestic sewage treatment plant flow (m ³ /d)	2000		
Conditions and measures related to external treatment of waste for dispos			
Combustion emissions limited by required exhaust emission controls [ETW1]. C			
considered in regional exposure assessment [ETW2].			
Conditions and measures related to external recovery of waste			
This substance is consumed during use and no waste of the substance is generated to recover			
[ERW3].			
Section 3 Exposure Estimation			
3.1. Health			
The ECETOC TRA tool has been used to estimate workplace exposures unless otherwise indicated. G21.			
3.2. Environment			
The Hydrocarbon Block Method has been used to calculate environmental exposure with the Petrorisk			
model [EE2].			
Section 4 Guidance to check compliance with the Exposure Scenario			
4.1. Health			
Predicted exposures are not expected to exceed the DN(M)EL when the Risk Management			
Measures/Operational Conditions outlined in Section 2 are implemented. G22.			
Where other Risk Management Measures/Operational Conditions are adopted, then users should ensure			
that risks are managed to at least equivalent levels. G23.			
······································			
Available hazard data do not enable the derivation of a DNEL for carcinogenic effects. G33. Available hazard			
data do not support the need for a DNEL to be established for other health effects. G36. Risk Management			
Measures are based on qualitative risk characterisation. G37.			
4.2. Environment			
Guidance is based on assumed operating conditions which may not be applicable to all sites; thus,			
scaling may be necessary to define appropriate site-specific risk management measures [DSU1]. Required			
removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or in			
combination [DSU2]. Required removal efficiency for air can be achieved using onsite technologies, either			
alone or in combination [DSU3]. Further details on scaling and control technologies are provided in SpERC			
factsheet (http://cefic.org/en/reach-for-industries-libraries.html) [DSU4].

SAFETY DATA SHEET (SDS): FUEL OIL; FUEL OIL 100 According to Regulation (EC) No 1907/2006 (REACH) Page 34 of 34

Version: 1.2 Revision date: 26/04/2012

Section 4 Guidance to check compliance with the Exposure Scenario

4.1. Health

Predicted exposures are not expected to exceed the DN(M)EL when the Risk Management Measures/Operational Conditions outlined in Section 2 are implemented. G22.

Where other Risk Management Measures/Operational Conditions are adopted, then users should ensure that risks are managed to at least equivalent levels. G23.

Available hazard data do not enable the derivation of a DNEL for carcinogenic effects. G33. Available hazard data do not support the need for a DNEL to be established for other health effects. G36. Risk Management Measures are based on qualitative risk characterisation. G37.

4.2. Environment

Guidance is based on assumed operating conditions which may not be applicable to all sites; thus, scaling may be necessary to define appropriate site-specific risk management measures [DSU1]. Required removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or in combination [DSU2]. Required removal efficiency for air can be achieved using onsite technologies, either alone or in combination [DSU3]. Further details on scaling and control technologies are provided in SpERC factsheet (http://cefic.org/en/reach-for-industries-libraries.html) [DSU4].

Max RCR Water = 2,42E-01 Max RCR Air = 7,89E-02
